

The future of our planet questions

1. **Do you think in the future we will only eat fruit and vegetables grown in our own country?**

If pollution keeps increasing, and **I sincerely hope it won't**, we will only be able to consume products produced very close to us, since transportation will have to be reduced in order to **avoid the exhaust** of toxic fumes to the atmosphere and the breathable air, **if there's any left**.

2. **Many animals may become extinct in a few years which animal would you save and why?**

I would save the bees, without a doubt. Bees are the animal **which allows** life in the planet. If it wasn't for the bees and their labour **pollinating** plants, we wouldn't be able to grow vegetables **nor** feed the animals we get meat from. **That is why** it is so worrying that this species is quickly disappearing and we should be dedicating more effort to their conservation

3. **How many years does it take for an environment to recover from an oil spill?**

I am not quite sure of the exact amount of time it would take to recover from that, but I could imagine it wouldn't be just a few years. Oil spills are a huge problem that **endangers not only** the marine life, **but also** human life, since some of the fish we consume **may have been** contaminated before they get to our tables.

4. **Do you think houses will be more environmentally friendly in the future?**

In the hopes of stopping climate change, I think world leaders and CEO's of big companies will **eventually** realise that **it is, in fact**, essential to become green and this starts in the way we consume energy and the sources that provide said energy to us. With regards to this issue, I think there will be laws made to **ensure** a sustainable **usage** of natural resources inside the **household**.

5. **Where will we get our energy when we run out of oil?**
6. **How will India and China affect the environment in the future?**
7. **What will happen if we keep polluting the environment?**
8. **Will the climate keep changing or go back to normal?**
9. **Will science find a solution to the environmental problems we have? What kind of solution will it be?**
10. **Do you think not recycling will be a punishable crime in your country in a few years from now?**
